

Today's Topics

Computer Science 1 Review

Upcoming

Final Exam: Wednesday, 12/8, 7:00pm, B111 BioSci

Review Session: Sunday, 12/5, 5:00-7:00pm, D106 LSRC

Reading

Great Ideas, Chapter 4 - 15

CPS 001

42.1

4.Top-Down Programming, Subroutines, and a Database Application

- ❖ Functions using Functions
- ❖ Getting Information In and Out of Functions
- ❖ Class Data: known within class.
- ❖ Formal Parameters/Arguments
- ❖ Syntax: Using a Function
- ❖ Functions that Return Values
- ❖ Syntax: Defining a Function
- ❖ Larger Problems: How to Deal with the Complexity
 - ❑ Divide and Conquer
 - ❑ Design: Stepwise Refinement
 - ❑ Top-Down Implementation

CPS 001

42.2

4.Top-Down Programming, Subroutines, and a Database Application

- ❖ "Parallel" Arrays or "Corresponding" Arrays
 - ❑ Model Phone Book Capability
 - ❑ Typical Access by Name
 - ❑ Access by other Fields (other arrays)
- ❖ Extend Idea to Database
- ❖ Basic Data Base Functions
- ❖ Wild Card Retrieval
- ❖ Used Car Database
- ❖ Relational Data Bases

CPS 001

42.3

4.Top-Down Programming, Subroutines, and a Database Application

- ❖ Recursion
 - ❑ Factorial (N!)
 - ❑ Iterative Approach for Factorial
 - ❑ Exponentiation (X^N)
- ❖ Church-Markov-Turing Thesis
 - ❑ This part of Java lets you solve all kinds of algorithms

CPS 001

42.4

5. Graphics, Classes, and Objects

❖ Basic Stuff

- ❑ Canvas class, Graphics class, pixels, Coordinates

❖ Graphics Methods

- ❑ `void drawLine(int x1, int y1, int x2, int y2)`
- ❑ `void drawRect(int x, int y, int width, int height)`
- ❑ `void drawOval(int x, int y, int width, int height)`
- ❑ `void setColor(Color c)`

❖ Example: (Using Recursion) `Serpinsky.java`

CPS 001

42.5

5. Graphics, Classes, and Objects

❖ Writing a Class

- ❑ Header
- ❑ Contents of a class definition
- ❑ The Constructor
- ❑ The `Serp` Class to draw Serpinsky Gasket

❖ Simple-Minded Animation

- ❑ Draw and Erase

CPS 001

42.6

6. Simulation

❖ Simulation: Motivation

❖ Optimization, Simulation: Biggest Dog Lot

❖ How Could We Automate Process?

❖ Other Roles For Simulations

- ❑ Economy, Policy (e.g. birth control), Marketing
- ❑ Camera Lenses, UNC CS Walkthrough, Virtual Reality

❖ Simulation in Microelectronics

- ❑ Logic, Layout, Circuit, Process

❖ Design and Manufacturing

CPS 001

42.7

7. Software Engineering

❖ Engineering a Program - Programming in the Large

❖ What is Good Software?

❖ Program Life Cycle, Feedback Cycles

❖ Understanding Problem / Specifications

❖ Debugging

❖ Correctness, Proofs?

❖ Documentation

❖ Testing

❖ Bottom Line: Productivity: **15 LINES OF CODE/DAY**

❖ Many People? The "Committee": Interaction

❖ Organizational Schemes: e.g. *Chief Programmer Team*

CPS 001

42.8

7. Software Engineering

❖ Killer Robot Scenario

- ❑ Development Models
 - Waterfall
 - Prototyping
- ❑ Testing
- ❑ User Interface

❖ Ethics

CPS 001

42.9

8. Machine Architecture

- ❖ Architecture (definition)
- ❖ Hardware / Software
- ❖ Basic Computer very primitive
- ❖ Architectural Features
 - ❑ Memory
 - ❑ CPU: AX, IP, IR, CF
- ❖ Fetch/Execute Cycles
- ❖ Need to handle IF and WHILE situations
- ❖ Tracing (often the only way to understand)
- ❖ Loop Example: Factorial Example
- ❖ Handling Lists or Arrays (Self Modifying Code)
- ❖ Fancier Architecture

CPS 001

42.10

9. Language Translation

- ❖ Importance of language
- ❖ Goal: *Translate Java To Assembler*
- ❖ Revise Syntactic Production Rules (seen before)
- ❖ Use Rules to Modify Strings
- ❖ Add Semantic ("meaning") Components to our Rules
- ❖ Use Syntactic Derivation to Generate Semantic Rules;
Use Semantic rules to Generate Code
- ❖ Rules for Looping
- ❖ Important: *Everything done by simple substitution*
- ❖ Everything "adds up"

CPS 001

42.11

Electric Circuits

- ❖ Levels of a Computer System
- ❖ Circuits: Water Model (the real thing = electrons)
 - ❑ battery, generators, heat -> light, motors
- ❖ Circuits With Switches (e.g. knife switch)
- ❖ Logic/Truth Tables: AND, OR
- ❖ Implementing Logic with Switches
- ❖ Logical (Boolean) Expression
- ❖ Equivalence of:
 - ❑ Circuit with Switches, Truth Tables, Boolean Expression
- ❖ Arbitrary Truth table for $f(x,y,z)$

CPS 001

42.12

Electric Circuits

- ❖ Relays
- ❖ Storing Information (Memory): Latch
- ❖ Binary Numbers
 - ❑ Conversion to and from Decimal
- ❖ Binary Addition
 - ❑ Truth Tables
 - ❑ Block Diagram
 - ❑ Simple *Adder* Circuit
 - ❑ Decoding/Control

CPS 001

42.13

12. Computer Communications

- ❖ Computer Communications is one of the Great Ideas
- ❖ Modes of Communications
- ❖ Like Most of Computing: Layers upon Layers
- ❖ Basic Communications: In binary
- ❖ Connection Mode
 - ❑ Circuit Switched, Message Switched, Packet Switched

TCP/IP

- ❖ Ethernet (Bus Example)
- ❖ Internet -- a network of LANs that are interconnected
- ❖ Packets -- the currency of the Internet
- ❖ The Layers
 - ❑ The Physical Layer, The IP (Internet Protocol) Layer
 - ❑ The TCP Layer, The Application Layer

CPS 001

42.14

12. Computer Communications

- ❖ Packets within Packets (Encapsulation)
- ❖ Reliability
- ❖ Addressing (Layers Again!)
 - ❑ Hardware Address (Ethernet Address)
 - ❑ IP Address
 - ❑ Domain Name (address)
- ❖ Applications
 - ❑ email, news, talk, ftp, telnet, ssh, rlogin
 - ❑ information services: WWW, Older: gopher, WAIS
- ❖ Client/Server
 - ❑ Print Server, File Server, Name Server,
 - ❑ WWW

CPS 001

42.15

11. Security, Privacy and Wishful Thinking

- ❖ Billions in Losses
- ❖ Possible Traps in Public Systems
 - ❑ Trojan Horse, Onlooker, Digital camera
- ❖ Good Passwords and Cracking
 - ❑ Briefcase combination lock
 - ❑ Analysis of brute force methods
 - ❑ Password on a Computer
 - ❑ Dictionary Attacks
- ❖ Encryption
 - ❑ Monoalphabetic Substitution
 - ❑ Polyalphabetic Substitution
 - ❑ The Vignere Cypher; The Babbit Solution

CPS 001

42.16

11. Security, Privacy and Wishful Thinking

- ❖ **Cypher Reuse: BAD**
- ❖ **One Time Pads: Can be Absolutely Secure**
- ❖ **The Key Exchange Problem**
 - ❑ Using your "secure" channel (**bad**)
 - ❑ A Padlock Analogy
- ❖ **Public Key Encryption**
 - ❑ A Padlock Analogy
 - ❑ Rivest, Shamir, and Adleman (RSA) Encryption
 - Using Public Key and Private Key
 - Primes and Factoring
 - ❑ Breaking the Code: *Factoring*

CPS 001

42.17

11. Security, Privacy and Wishful Thinking

- ❖ **Public Key Encryption**
 - ❑ Digital Signatures
 - Using Private Key and Public Key
 - Need for Time Stamps
- ❖ **Other Attacks (Buzz Words)**
 - ❑ Many Leave No Trace
 - ❑ Password Hacking, IP Spoofing, Replay Attack
 - ❑ Man in the Middle, Denial of Service
- ❖ **Whom Can You Trust?**
 - ❑ Viruses, Trapdoors, Trojan Horses, Common Sense
- ❖ **The Strong Encryption Trap**

CPS 001

42.18

10. Virtual Environments for Computing

- ❖ **The Raw Machine Provides a Hostile Environment**
- ❖ **Early Years Had Major Theme: CPU Time Precious**
- ❖ **Later Years: Cheaper and Cheaper Hardware**
- ❖ **What Does an Operating System Do?**
 - ❑ Processor Management (Multiprogramming)
 - ❑ I/O Systems
 - ❑ Memory Management
 - ❑ Software Environments
- ❖ **Memory Management**
 - ❑ Memory Hierarchies, Paging, Protection

CPS 001

42.19

10. Virtual Environments for Computing

- ❖ **I/O Systems**
 - ❑ Files Systems, Communications/Networking
 - ❑ Graphical User Interfaces (GUI)
- ❖ **Processor Management**
 - ❑ True Parallel Processes vs. Simulated
 - ❑ Synchronization
 - Race condition
 - Deadlock

CPS 001

42.20

Changing Computer Technology

- ❖ **Some Fundamental Limitations**
 - ❑ Speed of light, heat dissipations, capacitance and inductance
- ❖ **Other Important Concerns**
 - ❑ Economics !!!, Noise, Lifetime (mtf), Space
- ❖ **Relay Computers (and problems)**
- ❖ **Vacuum Tube Computers (and problems)**
- ❖ **Transistor**
- ❖ **Integrated Circuits -- VLSI**
- ❖ **Economics of Silicon (Micro-electronics): CPUs in Everything**
- ❖ **Technology Summary (table)**

CPS 001

42.21

13. Program Execution Time

- ❖ **On the Limitations of Computer Science**
 - ❑ 1. too slow. 2. Non-computable. 3. Don't know algorithm
- ❖ **Time Complexity, N**
- ❖ **Study of a Sorting Algorithm: Selection Sort: N^2**
- ❖ **Polynomial = Tractable**
 - ❑ **Linear Time Algorithms:** $t = A * N$
 - ❑ **Cubic Time Algorithms:** $t = A * N^3$
 - ❑ **Quicksort:** $t = A * N * \log(N)$
 - ❑ **Binary Search:** $t = A * \log(N)$
- ❖ **Intractable Algorithms: Exponential $t = A * B^N$**
 - ❑ Chess, Traveling Salesperson, Towers of Hanoi
- ❖ **More hardware not always the answer!**

CPS 001

42.22

14. Parallel Computation

- ❖ **Limitation on Processor Speed**
 - ❑ Speed of Light
 - ❑ Manufacturing Problems with Small Sizes
 - ❑ Heat Dissipation
- ❖ **Ultimately Parallelism is Only Hope**
- ❖ **Forms of Parallelism**
 - ❑ Word Size, Pipe Line (Laundry Example)
 - ❑ Multiprocessors, Networks of Processors, Internet
- ❖ **Speedup**
- ❖ **What can we do with 100 processors?**
 - ❑ Even with optimal speedup no big help for B^N programs

CPS 001

42.23

15. Noncomputability

- ❖ **Certain Problems Not Amenable to Computer Solution**
- ❖ **Existence of Noncomputable Functions**
 - ❑ **Approach: *Matching up Programs and Functions***
 - ❑ **Have: Uncountable Infinity of Functions (cannot be put into a row)**
 - ❑ **All Programs Can be Ordered**
 - ❑ **Try to Draw Lines Between Functions and Programs**
 - ❑ **Many *more* Functions than Programs!**
- ❖ **Programs that Read Programs**
 - ❑ E.g., Java Compiler
- ❖ **Solving the *Halting Problem***

CPS 001

42.24

15. Noncomputability

- ❖ Proofs by Contradiction (Indirect Proof)
- ❖ Proving non-computability
 - Assume Existence of Function `halt`:
 - Use in way resulting in *Paradox!*
 - Therefore **halt cannot exist!**
- ❖ What Does It All Mean?

CPS 001

42.25

The Human Genome

- ❖ Genome: makeup: The Double Helix - DNA
 - 24 Chromosomes, 20-25 thousand Genes
 - 3.5 Gpb (3,500,000,000 base pairs)
 - Bases denoted by letters **A, C, G, T**
 - Strand of DNA (in each of our cells) approx *6 feet long!*
- ❖ Alphabet demo: *reconstruct* alphabet fragments?
 - Assume each letter used only once, can match on *single* character
- ❖ Reconstruction from DNA fragments
 - More difficult: Only 4 characters: **A C G T**
 - **repetition** in the sequence: Need long overlaps
 - Demo: example with a sequence much longer than alphabet
 - Identify Overlaps to reconstruct; can get original sequence

CPS 001

42.26

The Human Genome

- ❖ The Real World (not toy alphabet problems)
 - String lengths are **huge**: ($3 * 10^9$)
 - Use fragments because *Automatic* Sequencers Available
 - Limited to lengths of 800 base pairs from each end of strand
 - Now use of the *Shotgun Method* of Sequencing
- ❖ Shotgun Sequencing
 - Randomly cut genome into small pieces (~5 Kbp)
 - Make many identical copies of these pieces
 - Ends sequenced to produce *reads*
- ❖ What's left is a Data Processing Problem
 - Problems: Gaps, Repeats, Sequencing Errors
 - Effectively “slide” ends over each other for match
 - Compare each read with each other read: N^2 is ~ $9*10^{12}$ compares

CPS 001

42.27

The Human Genome

- ❖ Interesting Competition
 - BAC to BAC Sequencing
 - Public Human Genome Project (1988 -)
 - Whole Genome Shotgun Sequencing
 - Celera Genomics (private: Craig Ventnor, Eugene Myers)
 - Later start (1998 -), “finished” at same time
 - Whole Genome Shotgun method appears to have won
- ❖ Job just beginning!
 - Need to find out what in Genome affects what in practice
 - Much labeled “junk” DNA because it doesn't seem to affect anything.

CPS 001

42.28
