Announcements

- Assignment 7 – **DRAW a big X through this**
  - There is NO Storyboard due today
  - Assignment 7 is out after Test 2
- Assignment 6 is due today!
- Today
  - Chap 10 – variables and arrays

---

Review: Properties

- Where is the class?
- Where is the object?
- A class defines properties
- When an object is created it receives its own set of properties

---

State and Changing State

- State of object – each property stores info about the object
  - Example:
    - vehicle
    - isShowing

- State change

---

![Diagram of class and object properties](image)
Class-level Variables

- New variables can be added to the properties of an object – class-level
- The value of the variable can be changed
  - The variable is **mutable**.
  - Can be used to track state changes.

Inheritance

- If an object (and its new variable) are saved out and given a new name, a new class is created.
  - This is inheritance!
  - The new class **inherits** all properties and methods of original class.
    - Did this before by adding new methods to a class and saving it out.

What is an array?

- An **array** is a collection of objects or information organized in a specific order
- The individual components (elements) are of the same type (all object or all number, etc.)
- Analogy – Music CD
  - Collection of songs listed in order
  - CD player allows you to
    - Play songs in order
    - Play songs by specifying its number
    - Play songs in random order

Arrays in Alice

- In Alice, array is a data structure to organize objects or information
- An array is not visible, it is a way of organizing
- But…. Alice has a 3D model to help you “see” the array
Example – Create a visualization of an array of people

- Add 5 people to the world
- Add an array visualization
- Not an array yet, must add people to the array

- Positions in array numbered starting with 0

Initialize array - Add Alice to Array in position 0

- Alice automatically moves to the 0 position!

Add Soldier to the Array

- Soldier moves automatically to position 1 (which is the 2nd position)!

Add RandomGuy, Skater and Rockette

- The array initialization is complete!

- Set isVisible for arrayVisualization to false
  - Array not seen
Session 9: Setting Arrays

- Objects in an array are called elements.
- Use "let" to set a position in an array.
- Using "let".

Array vs. List

- **Array**
  - Elements are ordered
  - Can access a particular element – 3
  - Use “Loop” - loop over elements – one at a time, OR every second element, etc

- **List**
  - Elements are not ordered
  - Use “For all in order”, “For all together” – does something to each element in the list – just don’t know the order this occurs
Swapping two elements in the array

- Swap the objects at positions 0 (fanDancer) and 3 (duckPrince)
- Add in an ObjectVisualization, this is like a variable for an object. (same folder where ArrayVisualization is)

Swapping objects at 0 and 3 (cont)

- Only one element at a time can be in a slot in the array. To swap two elements, you have to move one of them out temporarily.
- Move object at index 0 to objectVisualization (this frees up slot 0)

Swapping objects at 0 and 3 (cont)

- Now you can move the item in slot 3 over to slot 0 (note the duckPrince moved over)
- Now slot 3 is empty

Swapping objects at 0 and 3 (cont)

- Now move the object that was originally in slot 0 and was saved temporarily in the ObjectVisualization, over to slot 3
Swapping objects at 0 and 3 (code)

- Here is the code that corresponds to the swapping of the items in slots 0 and 3.

```javascript
let ObjectVisualization = the value at ArrayVisualization[0]
let ArrayVisualization = [0]
let ArrayVisualization = [3]
```

Shuffle the array

- For each item in the array, swap it randomly with another object

SelectionSort the array

- Find the position of the shortest object
  - Swap that object with the object in position 0
- Find the position of the next shortest object
  - Swap that object with the object in position 1
- Etc…. Until the array is sorted.

Classwork Today

- Shuffle Array
- Sort Array
