Which of the following languages are CFL?

- $L = \{a^n b^n c^j \mid 0 < n \leq j\}$
- $L = \{a^n b^n a^n b^j \mid n > 0, j > 0\}$
- $L = \{a^n b^n a^k b^p \mid n + j \leq k + p, n > 0, j > 0, k > 0, p > 0\}$

**Pumping Lemma for Regular Language’s**: Let $L$ be a regular language, Then there is a constant $m$ such that $w \in L$, $|w| \geq m$, $w = xyz$ such that

- $|xy| \leq m$
- $|y| \geq 1$
- for all $i \geq 0$, $xy^iz \in L$

**Pumping Lemma for CFL’s** Let $L$ be any infinite CFL. Then there is a constant $m$ depending only on $L$, such that for every string $w$ in $L$, with $|w| \geq m$, we may partition $w = uvxyz$ such that:

- $|vx| \leq m$, (limit on size of substring)
- $|vy| \geq 1$, ($v$ and $y$ not both empty)
- For all $i \geq 0$, $uv^i xy^i z \in L$

**Proof**: (sketch) There is a CFG $G$ s.t. $L=L(G)$.

Consider the parse tree of a long string in $L$.

For any long string, some nonterminal $N$ must appear twice in the path.
Example: Consider $L = \{ a^n b^n c^n : n \geq 1 \}$. Show $L$ is not a CFL.

- **Proof:** (by contradiction)
  
  Assume $L$ is a CFL and apply the pumping lemma.
  
  Let $m$ be the constant in the pumping lemma and consider $w = a^m b^m c^m$. Note $|w| \geq m$.
  
  Show there is no division of $w$ into $uvwxyz$ such that $|vy| \geq 1$, $|vxy| \leq m$, and $uv^i xy^i z \in L$ for $i = 0, 1, 2, \ldots$.
  
  Case 1: Neither $v$ nor $y$ can contain 2 or more distinct symbols. If $v$ contains $a$’s and $b$’s, then $uv^2 xy^2 z \notin L$ since there will be $b$’s before $a$’s.
  
  Thus, $v$ and $y$ can be only $a$’s, $b$’s, or $c$’s (not mixed).
  
  Case 2: $v = a^{t_1}$, then $y = a^{t_2}$ or $b^{t_3}$ ($|vxy| \leq m$)
  
  If $y = a^{t_2}$, then $uv^2 xy^2 z = a^{m+t_1+t_2} b^m c^m \notin L$ since $t_1 + t_2 > 0$, $n(a) > n(b)$’s (number of $a$’s is greater than number of $b$’s)
  
  If $y = b^{t_3}$, then $uv^2 xy^2 z = a^{m+t_1} b^{m+t_3} c^m \notin L$ since $t_1 + t_3 > 0$, either $n(a) > n(c)$’s or $n(b) > n(c)$’s.
  
  Case 3: $v = b^{t_1}$, then $y = a^{t_2}$ or $c^{t_3}$
  
  If $y = a^{t_2}$, then $uv^2 xy^2 z = a^m b^{m+t_1+t_2} c^m \notin L$ since $t_1 + t_2 > 0$, $n(b) > n(a)$’s.
  
  If $y = c^{t_3}$, then $uv^2 xy^2 z = a^m b^m c^{m+t_3} \notin L$ since $t_1 + t_3 > 0$, either $n(b) > n(a)$’s or $n(c) > n(a)$’s.
  
  Case 4: $v = c^{t_1}$, then $y = c^{t_2}$
  
  then, $uv^2 xy^2 z = a^m b^m c^{m+t_1+t_2} \notin L$ since $t_1 + t_2 > 0$, $n(c) > n(a)$’s.
  
  Thus, there is no breakdown of $w$ into $uvxyz$ such that $|vy| \geq 1$, $|vxy| \leq m$ and for all $i \geq 0$, $uv^i xy^i z$ is in $L$. Contradiction, thus, $L$ is not a CFL. Q.E.D.
Example: Why would we want to recognize a language of the type \( \{ a^n b^n c^n : n \geq 1 \} \)?

Example: Consider \( L = \{ a^n b^n c^p : p > n > 0 \} \). Show \( L \) is not a CFL.

- **Proof:** Assume \( L \) is a CFL and apply the pumping lemma. Let \( m \) be the constant in the pumping lemma and consider \( w = \) ____________ Note \(|w| \geq m\).

  Show there is no division of \( w \) into \( uvxyz \) such that \(|vy| \geq 1\), \(|vxy| \leq m\), and \( uv^i xy^i z \in L \) for \( i = 0, 1, 2, \ldots \).

Thus, there is no breakdown of \( w \) into \( uvxyz \) such that \(|vy| \geq 1\), \(|vxy| \leq m\) and for all \( i \geq 0\), \( uv^i xy^i z \in L \). Contradiction, thus, \( L \) is not a CFL. Q.E.D.
Example: Consider \( L = \{a^i b^k : j^2 \} \). Show \( L \) is not a CFL.

• **Proof:** Assume \( L \) is a CFL and apply the pumping lemma. Let \( m \) be the constant in the pumping lemma and consider \( w = \) ________. Show there is no division of \( w \) into \( uvxyz \) such that \( |vy| \geq 1, |vxy| \leq m \), and \( uv^i xy^i z \in L \) for \( i = 0, 1, 2, \ldots \).

Case 1: Neither \( v \) nor \( y \) can contain 2 or more distinct symbols. If \( v \) contains \( a \)'s and \( b \)'s, then \( uv^2 xy^2 z \notin L \) since there will be \( b \)'s before \( a \)'s.

Thus, \( v \) and \( y \) can be only \( a \)'s, and \( b \)'s (not mixed).

Thus, there is no breakdown of \( w \) into \( uvxyz \) such that \( |vy| \geq 1, |vxy| \leq m \) and for all \( i \geq 0 \), \( uv^i xy^i z \) is in \( L \). Contradiction, thus, \( L \) is not a CFL. Q.E.D.

**Exercise:** Prove the following is not a CFL by applying the pumping lemma. (answer is at the end of this handout).

Consider \( L = \{a^{2n} b^{2p} c^n d^p : n, p \geq 0 \} \). Show \( L \) is not a CFL.
Example: Consider $L = \{ w\bar{w}w : w \in \Sigma^* \}$, $\Sigma = \{a, b\}$, where $\bar{w}$ is the string $w$ with each occurrence of $a$ replaced by $b$ and each occurrence of $b$ replaced by $a$. For example, $w = baaa$, $\bar{w} = abbb$, $w\bar{w} = baaaabbb$. Show $L$ is not a CFL.

- Proof: Assume $L$ is a CFL and apply the pumping lemma. Let $m$ be the constant in the pumping lemma and consider $w = \underline{\text{__________}}$

Show there is no division of $w$ into $uvxyz$ such that $|vy| \geq 1$, $|vxy| \leq m$, and $uv^ixy^iz \in L$ for $i = 0, 1, 2, \ldots$.

Thus, there is no breakdown of $w$ into $uvxyz$ such that $|vy| \geq 1$, $|vxy| \leq m$ and for all $i \geq 0$, $uv^ixy^iz$ is in $L$. Contradiction, thus, $L$ is not a CFL. Q.E.D.
**Example:** Consider $L = \{a^nb^npa^n\}$. $L$ is a CFL. The pumping lemma should apply!

Let $m \geq 4$ be the constant in the pumping lemma. Consider $w = a^mb^mb^ma^m$.

We can break $w$ into $\text{uvxyz}$, with:

- If you apply the pumping lemma to a CFL, then you should find a partition of $w$ that works!

---

**Chap 8.2 Closure Properties of CFL’s**

**Theorem** CFL’s are closed under union, concatenation, and star-closure.

- **Proof:**
  Given 2 CFG $G_1 = (V_1,T_1,S_1,P_1)$ and $G_2 = (V_2,T_2,S_2,P_2)$
  
  - **Union:**
    Construct $G_3$ s.t. $L(G_3) = L(G_1) \cup L(G_2)$.
    $G_3 = (V_3,T_3,S_3,P_3)$

  - **Concatenation:**
    Construct $G_3$ s.t. $L(G_3) = L(G_1) \circ L(G_2)$.
    $G_3 = (V_3,T_3,S_3,P_3)$
– Star-Closure
  Construct $G_3$ s.t. $L(G_3) = L(G_1)^*$
  $G_3 = (V_3, T_3, S_3, P_3)$

QED.

**Theorem** CFL’s are NOT closed under intersection and complementation.

- **Proof:**
  - Intersection:
  
  - Complementation:
**Theorem:** CFL's are closed under *regular* intersection. If $L_1$ is CFL and $L_2$ is regular, then $L_1 \cap L_2$ is CFL.

- **Proof:** (sketch) This proof is similar to the construction proof in which we showed regular languages are closed under intersection. We take a NPDA for $L_1$ and a DFA for $L_2$ and construct a NPDA for $L_1 \cap L_2$.

  $M_1 = (Q_1, \Sigma, \Gamma, \delta_1, q_0, z, F_1)$ is an NPDA such that $L(M_1) = L_1$.

  $M_2 = (Q_2, \Sigma, \delta_2, q_0', F_2)$ is a DFA such that $L(M_2) = L_2$.

Example of replacing arcs (NOT a Proof!):
Note this is not a proof, but sketches how we will combine the DFA and NPDA. We must formally define $\delta_3$. If

then

Must show

if and only if

Must show:

$w \in L(M_3)$ iff $w \in L(M_1)$ and $w \in L(M_2)$.

QED.
Questions about CFL:

1. Decide if CFL is empty?

2. Decide if CFL is infinite?

Example: Consider \( L = \{a^{2n}b^{2m}c^n d^m : n, m \geq 0\} \). Show \( L \) is not a CFL.

- **Proof:** Assume \( L \) is a CFL and apply the pumping lemma. Let \( m \) be the constant in the pumping lemma and consider \( w = a^{2m}b^{2m}c^m d^m \).

  Show there is no division of \( w \) into \( uvxyz \) such that \( |vy| \geq 1, |vxy| \leq m \), and \( uv^i xy^i z \in L \) for \( i = 0, 1, 2, \ldots \).

  **Case 1:** Neither \( v \) nor \( y \) can contain 2 or more distinct symbols. If \( v \) contains \( a \)'s and \( b \)'s, then \( uv^2 xy^2 z \not\in L \) since there will be \( b \)'s before \( a \)'s.

  Thus, \( v \) and \( y \) can be only \( a \)'s, \( b \)'s, \( c \)'s, or \( d \)'s (not mixed).

  **Case 2:** \( v = a^t_1 \), then \( y = a^t_2 \) or \( b^t_3 \) \(|vy| \leq m\)

  If \( y = a^t_2 \), then \( uv^2 xy^2 z = a^{2m+t_1+t_2}b^{2m+c^t_1} d^m \not\in L \) since \( t_1 + t_2 > 0 \), the number of \( a \)'s is not twice the number of \( c \)'s.

  If \( y = b^t_3 \), then \( uv^2 xy^2 z = a^{2m+t_1}b^{2m+t_3}c^t_1 d^m \not\in L \) since \( t_1 + t_3 > 0 \), either the number of \( a \)'s (denoted \( n(a) \)) is not twice \( n(c) \) or \( n(b) \) is not twice \( n(d) \).

  **Case 3:** \( v = b^t_1 \), then \( y = b^t_2 \) or \( c^t_3 \)

  If \( y = b^t_2 \), then \( uv^2 xy^2 z = a^{2m+b^t_2+m+t_2}c^m d^m \not\in L \) since \( t_1 + t_2 > 0, n(b) > 2*n(d) \).

  If \( y = c^t_3 \), then \( uv^2 xy^2 z = a^{2m+b^t_2+m+t_3}c^m d^m \not\in L \) since \( t_1 + t_3 > 0 \), either \( n(b) > 2*n(d) \) or \( 2*n(c) > n(a) \).

  **Case 4:** \( v = c^t_1 \), then \( y = c^t_2 \) or \( d^t_3 \)

  If \( y = c^t_2 \), then \( uv^2 xy^2 z = a^{2m+c^t_2+m+t_2}d^m \not\in L \) since \( t_1 + t_2 > 0, 2*n(c) > n(a) \).

  If \( y = d^t_3 \), then \( uv^2 xy^2 z = a^{2m+d^t_3+m+t_3}d^m \not\in L \) since \( t_1 + t_3 > 0 \), either \( 2*n(c) > n(a) \) or \( 2*n(d) > n(b) \).

  **Case 5:** \( v = d^t_1 \), then \( y = d^t_2 \)

  then \( uv^2 xy^2 z = a^{2m+d^t_1+m+t_2}d^m \not\in L \) since \( t_1 + t_2 > 0, 2*n(d) > n(c) \).

  Thus, there is no breakdown of \( w \) into \( uvxyz \) such that \(|vy| \geq 1, |vxy| \leq m \) and for all \( i \geq 0, uv^i xy^i z \) is in \( L \). Contradiction, thus, \( L \) is not a CFL. Q.E.D.
