CPS 140 - Mathematical Foundations of CS
Dr. Susan Rodger
Section: Properties of Regular Languages (Ch. 4) (handout)

## Example

$L=\left\{a^{n} b a^{n} \mid n>0\right\}$

## Closure Properties

A set is closed over an operation if
$\mathrm{L}_{1}, \mathrm{~L}_{2} \in$ class
$\mathrm{L}_{1}$ op $\mathrm{L}_{2}=\mathrm{L}_{3}$
$\Rightarrow \mathrm{L}_{3} \in$ class

## Example

$\mathrm{L}_{1}=\{\mathrm{x} \mid \mathrm{x}$ is a positive even integer $\}$
L is closed under
addition?
multiplication?
subtraction?
division?

## Closure of Regular Languages

Theorem 4.1 If $L_{1}$ and $L_{2}$ are regular languages, then

$$
\begin{aligned}
& \mathrm{L}_{1} \cup \mathrm{~L}_{2} \\
& \mathrm{~L}_{1} \cap \mathrm{~L}_{2} \\
& \mathrm{~L}_{1} \mathrm{~L}_{2} \\
& \bar{L}_{1} \\
& \mathrm{~L}_{1}^{*}
\end{aligned}
$$

are regular languages.

## Proof(sketch)

$\mathrm{L}_{1}$ and $\mathrm{L}_{2}$ are regular languages
$\Rightarrow \exists$ reg. expr. $r_{1}$ and $r_{2}$ s.t.
$\mathrm{L}_{1}=\mathrm{L}\left(r_{1}\right)$ and $\mathrm{L}_{2}=\mathrm{L}\left(r_{2}\right)$
$r_{1}+r_{2}$ is r.e. denoting $\mathrm{L}_{1} \cup \mathrm{~L}_{2}$ $\Rightarrow$ closed under union
$r_{1} r_{2}$ is r.e. denoting $\mathrm{L}_{1} \mathrm{~L}_{2}$
$\Rightarrow$ closed under concatenation
$r_{1}^{*}$ is r.e. denoting $L_{1}^{*}$
$\Rightarrow$ closed under star-closure
complementation:
$\mathrm{L}_{1}$ is reg. lang.
$\Rightarrow \exists$ DFA M s.t. $\mathrm{L}_{1}=\mathrm{L}(\mathrm{M})$
Construct M' s.t.
final states in M are nonfinal states in M' nonfinal states in M are final states in M'
$\Rightarrow$ closed under complementation
intersection:
$\mathrm{L}_{1}$ and $\mathrm{L}_{2}$ are reg. lang.
$\Rightarrow \exists$ DFA $\mathrm{M}_{1}$ and $\mathrm{M}_{2}$ s.t.
$\mathrm{L}_{1}=\mathrm{L}\left(\mathrm{M}_{1}\right)$ and $\mathrm{L}_{2}=\mathrm{L}\left(\mathrm{M}_{2}\right)$
$\mathrm{M}_{1}=\left(\mathrm{Q}, \Sigma, \delta_{1}, q_{0}, \mathrm{~F}_{1}\right)$
$\mathrm{M}_{2}=\left(\mathrm{P}, \Sigma, \delta_{2}, p_{0}, \mathrm{~F}_{2}\right)$
Construct $\mathrm{M}^{\prime}=\left(\mathrm{Q}^{\prime}, \Sigma, \delta^{\prime},\left(q_{0}, p_{0}\right), \mathrm{F}^{\prime}\right)$ $\mathrm{Q}^{\prime}=(\mathrm{Q} \times \mathrm{P})$
$\delta^{\prime}:$
$\delta^{\prime}\left(\left(q_{i}, p_{j}\right), a\right)=\left(q_{k}, p_{l}\right)$ if
$\mathrm{w} \in \mathrm{L}\left(\mathrm{M}^{\prime}\right) \Longleftrightarrow \mathrm{w} \in \mathrm{L}_{1} \cap \mathrm{~L}_{2}$
$\Rightarrow$ closed under intersection

## Example:

## Regular languages are closed under

| reversal | $\mathrm{L}^{R}$ |
| :--- | :--- |
| difference | $\mathrm{L}_{1}-\mathrm{L}_{2}$ |
| right quotient | $\mathrm{L}_{1} / \mathrm{L}_{2}$ |
| homomorphism | $\mathrm{h}(\mathrm{L})$ |

## Right quotient

Def: $\mathrm{L}_{1} / \mathrm{L}_{2}=\left\{x \mid x y \in \mathrm{~L}_{1}\right.$ for some $\left.y \in \mathrm{~L}_{2}\right\}$
Example:

$$
\begin{aligned}
& \mathrm{L}_{1}=\left\{a^{*} b^{*} \cup b^{*} a^{*}\right\} \\
& \mathrm{L}_{2}=\left\{b^{n} \mid n \text { is even, } n>0\right\} \\
& \mathrm{L}_{1} / \mathrm{L}_{2}=
\end{aligned}
$$

Theorem If $L_{1}$ and $L_{2}$ are regular, then $L_{1} / L_{2}$ is regular.
Proof (sketch)
$\exists \mathrm{DFA} \mathrm{M}=\left(\mathrm{Q}, \Sigma, \delta, q_{0}, \mathrm{~F}\right)$ s.t. $\mathrm{L}_{1}=\mathrm{L}(\mathrm{M})$.
Construct DFA M' $=\left(\mathrm{Q}, \Sigma, \delta, q_{0}, \mathrm{~F}^{\prime}\right)$

For each state i do
Make i the start state (representing $L_{i}^{\prime}$ )
if $\mathrm{L}_{i}^{\prime} \cap \mathrm{L}_{2} \neq \emptyset$ then put $q_{i}$ in $\mathrm{F}^{\prime}$ in $\mathrm{M}^{\prime}$

QED.

## Homomorphism

Def. Let $\Sigma, \Gamma$ be alphabets. A homomorphism is a function

$$
\mathrm{h}: \Sigma \rightarrow \Gamma^{*}
$$

## Example:

$$
\left.\begin{array}{l}
\Sigma=\{a, b, c\}, \Gamma=\{0,1\} \\
\\
\\
\\
\\
\\
\\
\\
\\
\mathrm{h}(\mathrm{a}(\mathrm{~b})=11 \\
\mathrm{h}(\mathrm{c})=00
\end{array}\right]
$$

Questions about regular languages :
L is a regular language.

- Given $\mathrm{L}, \Sigma, \mathrm{w} \in \Sigma^{*}$, is $\mathrm{w} \in \mathrm{L}$ ?
- Is L empty?
- Is L infinite?
- Does $\mathrm{L}_{1}=\mathrm{L}_{2}$ ?

## Ch. 4.3 - Identifying Nonregular Languages

If a language L is finite, is L regular?

If $L$ is infinite, is $L$ regular?

- $L_{1}=\left\{a^{n} b^{m} \mid n>0, m>0\right\}=$
- $L_{2}=\left\{a^{n} b^{n} \mid n>0\right\}$

Prove that $L_{2}=\left\{a^{n} b^{n} \mid n>0\right\}$ is ?

- Proof:

Pumping Lemma: Let $L$ be an infinite regular language. $\exists$ a constant $m>0$ such that any $w \in L$ with $|w| \geq m$ can be decomposed into three parts as $w=x y z$ with

$$
\begin{aligned}
& |x y| \leq m \\
& |y| \geq 1 \\
& x y^{i} z \in L \quad \text { for all } i \geq 0
\end{aligned}
$$

Meaning: Every long string in $L$ (the constant $m$ above corresponds to the finite number of states in $M$ in the previous proof) can be partitioned into three parts such that the middle part can be "pumped" resulting in strings that must be in $L$.

## To Use the Pumping Lemma to prove $L$ is not regular:

- Proof by Contradiction.

Assume L is regular.
$\Rightarrow \mathrm{L}$ satisfies the pumping lemma.
Choose a long string $w$ in $\mathrm{L},|w| \geq m$. (The choice of the string is crucial. Must pick a string that will yield a contradiction).
Show that there is NO division of $w$ into $x y z$ (must consider all possible divisions) such that $|x y| \leq m,|y| \geq 1$ and $x y^{i} z \in \mathrm{~L} \forall i \geq 0$.
The pumping lemma does not hold. Contradiction!
$\Rightarrow \mathrm{L}$ is not regular. QED.

Example L $=\left\{a^{n} c b^{n} \mid n>0\right\}$
L is not regular.

## - Proof:

Assume $L$ is regular.
$\Rightarrow$ the pumping lemma holds.
Choose $w=$
where $m$ is the constant in the pumping lemma. (Note that $w$ must be choosen such that $|w| \geq m$.)
The only way to partition $w$ into three parts, $w=x y z$, is such that $x$ contains 0 or more $a$ 's, $y$ contains 1 or more $a$ 's, and $z$ contains 0 or more $a$ 's concatenated with $c b^{m}$. This is because of the restrictions $|x y| \leq m$ and $|y|>0$. So the partition is:

It should be true that $x y^{i} z \in \mathrm{~L}$ for all $i \geq 0$.

Example L $=\left\{a^{n} b^{n+s} c^{s} \mid n, s>0\right\}$
L is not regular.

## - Proof:

Assume L is regular.
$\Rightarrow$ the pumping lemma holds.
Choose $w=$
The only way to partition $w$ into three parts, $w=x y z$, is such that $x$ contains 0 or more $a$ 's, $y$ contains 1 or more $a$ 's, and $z$ contains 0 or more $a$ 's concatenated with the rest of the string $b^{m+s} c^{s}$. This is because of the restrictions $|x y| \leq m$ and $|y|>0$. So the partition is:

Example $\Sigma=\{a, b\}, \mathrm{L}=\left\{w \in \Sigma^{*} \mid n_{a}(w)>n_{b}(w)\right\}$
L is not regular.

- Proof:

Assume L is regular.
$\Rightarrow$ the pumping lemma holds.
Choose $w=$

So the partition is:

Example $\mathrm{L}=\left\{a^{3} b^{n} c^{n-3} \mid n>3\right\}$
L is not regular.

## - Proof:

Assume L is regular. $\Rightarrow$ the pumping lemma holds.
Choose $w=a^{3} b^{m} c^{m-3}$ where $m$ is the constant in the pumping lemma. There are three ways to partition $w$ into three parts, $w=x y z$. 1) y contains only $a$ 's 2 ) y contains only $b$ 's and 3$)$ y contains $a$ 's and $b$ 's
We must show that each of these possible partitions lead to a contradiction. (Then, there would be no way to divide w into three parts s.t. the pumping lemma contraints were true).
Case 1: (y contains only $a$ 's). Then $x$ contains 0 to $2 a$ 's, $y$ contains 1 to $3 a$ 's, and $z$ contains 0 to 2 $a$ 's concatenated with the rest of the string $b^{m} c^{m-3}$, such that there are exactly $3 a$ 's. So the partition is:

$$
x=a^{k} \quad y=a^{j} \quad z=a^{3-k-j} b^{m} c^{m-3}
$$

where $k \geq 0, j>0$, and $k+j \leq 3$ for some constants $k$ and $j$.
It should be true that $x y^{i} z \in \mathrm{~L}$ for all $i \geq 0$.
$x y^{2} z=(x)(y)(y)(z)=\left(a^{k}\right)\left(a^{j}\right)\left(a^{j}\right)\left(a^{3-j-k} b^{m} c^{m-3}\right)=a^{3+j} b^{m} c^{m-3} \notin \mathrm{~L}$ since $j>0$, there are too many $a$ 's. Contradiction!
Case 2: (y contains only b's) Then $x$ contains 3 a's followed by 0 or more $b$ 's, $y$ contains 1 to $m-3$ $b$ 's, and $z$ contains 3 to $m-3 b$ 's concatenated with the rest of the string $c^{m-3}$. So the partition is:

$$
x=a^{3} b^{k} \quad y=b^{j} \quad z=b^{m-k-j} c^{m-3}
$$

where $k \geq 0, j>0$, and $k+j \leq m-3$ for some constants $k$ and $j$.
It should be true that $x y^{i} z \in \mathrm{~L}$ for all $i \geq 0$.
$x y^{0} z=a^{3} b^{m-j} c^{m-3} \notin \mathrm{~L}$ since $j>0$, there are too few $b$ 's. Contradiction!
Case 3: (y contains $a$ 's and $b$ 's) Then $x$ contains 0 to $2 a$ 's, $y$ contains 1 to $3 a$ 's, and 1 to $m-3 b$ 's, $z$ contains 3 to $m-1 b$ 's concatenated with the rest of the string $c^{m-3}$. So the partition is:

$$
x=a^{3-k} \quad y=a^{k} b^{j} \quad z=b^{m-j} c^{m-3}
$$

where $3 \geq k>0$, and $m-3 \geq j>0$ for some constants $k$ and $j$.
It should be true that $x y^{i} z \in \mathrm{~L}$ for all $i \geq 0$. $x y^{2} z=a^{3} b^{j} a^{k} b^{m} c^{m-3} \notin \mathrm{~L}$ since $j, k>0$, there are $b$ 's before $a$ 's. Contradiction!
$\Rightarrow$ There is no partition of $w$.
$\Rightarrow \mathrm{L}$ is not regular!. QED.

To Use Closure Properties to prove $L$ is not regular:
Using closure properties of regular languages, construct a language that should be regular, but for which you have already shown is not regular. Contradiction!

## - Proof Outline:

Assume L is regular.
Apply closure properties to $L$ and other regular languages, constructing $L$ ' that you know is not regular.
closure properties $\Rightarrow L^{\prime}$ is regular.
Contradiction!
L is not regular. QED.

Example L $=\left\{a^{3} b^{n} c^{n-3} \mid n>3\right\}$
L is not regular.

- Proof: (proof by contradiction)

Assume L is regular.
Define a homomorphism $h: \Sigma \rightarrow \Sigma^{*}$

$$
\begin{aligned}
& h(a)=a \quad h(b)=a \quad h(c)=b \\
& h(L)=
\end{aligned}
$$

Example $L=\left\{a^{n} b^{m} a^{m} \mid m \geq 0, n \geq 0\right\}$
L is not regular.

- Proof: (proof by contradiction)

Assume L is regular.

Example: $L_{1}=\left\{a^{n} b^{n} a^{n} \mid n>0\right\}$
$L_{1}$ is not regular.

- Proof:

Assume $L_{1}$ is regular.
Goal is to try to construct $\left\{a^{n} b^{n} \mid n>0\right\}$ which we know is not regular.
Let $L_{2}=\left\{a^{*}\right\} . L_{2}$ is regular.
By closure under right quotient, $L_{3}=L_{1} \backslash L_{2}=\left\{a^{n} b^{n} a^{p} \mid 0 \leq p \leq n, n>0\right\}$ is regular.
By closure under intersection, $L_{4}=L_{3} \cap\left\{a^{*} b^{*}\right\}=\left\{a^{n} b^{n} \mid n>0\right\}$ is regular.
Contradiction, already proved $L_{4}$ is not regular!
Thus, $L_{1}$ is not regular. QED.
