**Alice Lab Safety Video**

**Purpose:** To start the conversation about the need for lab safety in a way that livens it up and grabs the attention of the students.

**Standards:** N/A Has to be discussed, but not in the standards.

**Rationale:** The video created in alice allows me to show incidents in hyperbole adding a visual to an often boring and repetitive topic. This also allows me to showcase Alice early and introduces the idea of using it in the class.

**Procedure:** Show the video to break the ice then have a class discussion on safe and unsafe practices tailored to that particular science course. For instance, how to use a scalpel safely applies to an anatomy class, but not a chemistry class.

**Follow-up:** Safety Quiz, long-term EC assignment: present a concept or idea presented in class using Alice
