Under CONCERNING PATH NAMES

CONCERNING PATH NAMES

Usage: cd

Use cd to change directories. For example, if you want to change to the directory /home/user, you can enter:

cd /home/user

This command will change the current working directory to /home/user. You can use cd to change between different directories, which is useful when navigating the file system.

Usage: ls

Use ls to list the contents of a directory. For example, to list the contents of the current working directory, you can enter:

ls

This command will display a list of all the files and directories in the current working directory. You can use various options with ls to customize the output, such as:

ls -l

This will list the files with detailed information, including permissions, owner, group, size, and modification date.
