Emails Course

1) Process course put it in nicer format:
   list of lists of string

2) create an empty dictionary and fill it up:
   course name → list of emails

3) max list size

4) get all course names with max list size:
   put in a list
   sort it - take the first one

5) get list of emails for that course

6) sort list of emails

7) join
