## APT: CompSci 101, Fall 2016, APT

This is the testing page. Once your program works here, you need to run your APT on the submit page (back on the previous page).

<table>
<thead>

[**test/run**]
Announcements

• Reading and RQ3 due next class
• Assignment 1 due today!
  – See the catch up schedule – for everyone!
• APT 1 due on Tuesday, Sep 13
• Need a pin to add class – fill out form
• Exam accommodations – fill out form
• Lab this week
  – try out functions, Solve APT
• Today – Problem Solving, Python practice, solve an APT
Algorithm

- Recipe
- Sequence of steps that constitute instructions
- Step-by-step procedure for calculations

What does Nate Silver do?

**An Algorithm** to Predict a Bestseller
Wall Street Journal - 11 hours ago
20, have detected through an **algorithm** they designed to identify the DNA of bestselling novels. For the last five years, Matthew L. Jockers, ...
Algorithms that scale: An example

• Human Genome Project
  – Multiple approaches, relying heavily on computational power and algorithms
  – Combine reads of DNA sequences, we'll look at an illustrative example

• These combine bio/chemistry techniques with computational techniques to recreate the sequencing, e.g., CGATTCGG... from "live data", actual DNA.
Eugene (Gene) Myers

- Lead computer scientist/software engineer at Celera Genomics, then at Berkeley, now at Janelia Farms Research Institute (HHMI)

"What really astounds me is the architecture of life. The system is extremely complex. It's like it was designed." ... "There's a huge intelligence there."

- BLAST and WG-Shotgun
Whole Genome Shotgun with words

y, create, and s 
e get to work collabo 
...

• Creation algorithm
  – Take a phrase
  – Replicate it four times
  – Chop into "chunks"
    • 15-22 characters

• How to recreate original phrase?

From Algorithms to Code

• An algorithm that scales needs to run on a computer --- programming to the rescue!
• Extensive libraries help with programming
  – Brain or Neuroscience
  – Engineering and Mathematics
  – Genomics
  – Graphic User Interfaces, …
• We are using Python, extensible and simple
Understanding terminology: code

• Move from "Hello World" to "Hello Around the World"
  – Look at Python, code, libraries
  – Learning (reviewing) terminology about Python

```python
print "hello world"
```

```python
f = open("hello.txt")
for line in f:
    print line
```
Hello around world code

Running and Understanding Code

• Need Python compiler/interpreter
  – We're using Canopy, includes libraries

• Need an editor development environment
  – We use Eclipse and PyDev, open source and widely used, Ambient is Duke Plugin

• You need experience thinking and coding and debugging ideas and code:
  – Installing the suite of tools can be cumbersome
    • Persist, Perservere, Get Help, start over 😞
Barbara Liskov

• (one of) first women to earn PhD from compsci dept
  – Stanford 1968
• Turing award in 2008
  – Programming Languages

“It's much better to go for the thing that's exciting. But the question of how you know what's worth working on and what's not separates someone who's going to be really good at research and someone who's not. There's no prescription. It comes from your own intuition and judgment.”
Hello Around the World in Python

• We open a file, and we open a URL
  – Syntax slightly different, concept is similar
  – Real-world differences between files and URLs?

```python
f = open("hello_unicode.txt")
```
```
f = urllib2.urlopen("http://nytimes.com")
```

• Must adhere to syntactic rules of Python
  – Naming, whitespace, : or . or ( or ) or [ or ]

• Must adhere to semantic rules of Python
  – Can't loop over anything, more rules to follow
Starting with Python

• Variable
  – Name of a storage location – holds a value
  = to assign a value to a variable

• Type
  – Different types of data
  – A variable can stores data of a certain type
  – int, float, str

• operators in Python for numbers
  – Arithmetic: +, -, *, /, %, **

• Built-in functions: pow, abs, round, int, float
  example: pow(2, 3) + round(1.6)
Eclipse – Three ways to run

1. Write program and store in file
   – Create a PyDev project – a folder for programs
   – Create a PyDev module for each program (file)
   – Run in console

2. Create an APT in Eclipse and run on web

3. Run interactively
   – Open PyDev console
   – Execute each line as typed
   – Code not saved
Demo: Run interactively in Eclipse PyDev Console

• If Console window is not showing then
  – Click on Window, Show View, Console

• Then at the bottom of Eclipse, click here:

• Select PyDev Console, Python Console
Variables, Types, Expressions?

a = 5
b = 4
print b
a = a + b
print a
c = "fred"
print c

print a + b * 3
print (a + b) * 3
print a / b
print a / (b * 1.0)
Examples of functions
Functions explained

• In a calculator, sqrt: number in -> number out
  – What is domain, what is range?

• In MSWord, word count: document -> number
  – Domain is word doc, range is integer

• In browser, web: URL -> HTML formatted "page"
  – Domain is valid URL, range is HTML resources

• In Python we see similar structure!
Demo

• In Eclipse write a file with a function and run it
• stuff.py

```python
def sum(a, b):
    return a+b

print sum(3,5)
print sum(1,4)
```
Python Functions

• Answer these questions based on thinking, don't run any code

• Why do we need functions?
  – Manage complexity of large programs
  – Test and develop code independently
  – Reuse code in new contexts: create APIs!
Functions return values

• Most functions return values
  – Sometimes used to make things simpler, but returning values is a good idea

```python
def inch2centi(inches):
    return 2.54*inches

xh = inch2centi(72)
```

```python
def pluralize(word):
    return word + "es"

pf = pluralize("fish")
```
Functions can print info

- Some functions only print info
- Note there is no return statement in the function

```python
def helloPerson(name):
    print "hello" + name

helloPerson("Susan")
helloPerson("Ademola")
```
# APTs

## APT: CompSci 101, Fall 2016, APT

This is the testing page. Once your program works here, you need to run your APT on the submit page (back on the previous page).

<table>
<thead>

What is an APT? BMI APT

• Automated/Algorithmic Problem Testing
  – Write one function, 2-30 lines, solve a problem
  – Tested automagically in Eclipse or the browser
  – Lots of test cases – test test test test

• Start simple, build toward more complex
  – What is a function? A function call?
  – What is a parameter? Argument?
  – How do you run/execute a program
Demo Solving APT BMI

• Write your code in Eclipse
  – Create python file
  – Name of file important – case matters
  – name of function important – cut and paste this
  – Write your code
  – Test a few examples in Eclipse

• Run online on using APT Tester
  – Tests on lots of examples, Debug, fix
  – Get all GREEN

• Submit on APT page
  – README form too
