CompSci 101
Introduction to Computer Science

Dec 8, 2016
Prof. Rodger
Announcements

• Last Day of class!
• Assign 8 – With LATE Penalty thru Fri, Dec 9
• Assign 9 by Monday, none accepted after that
• APT 10 due by Monday, no Late APTs

• Form for taking Final exam another time
  – accommodations?
  – Three exams in a 24 hour period?
  – Room for some to take final with the other section
  – Fill out by tomorrow for consideration!!!
More Announcements

• Regrade for Exam 2 – submit by Friday, Dec 9
• Review Session – Tuesday 4pm (room TBA)
• Last Consulting Hours tonight
• Prof. Rodger will have office hours
  – Today 3-5pm, Tomorrow 2-5pm, more…
• Concern form – last minute concerns

• Today:
  – Wrapping up, Beyond CompSci 101
  – The Final exam
Final Exam

• Sec 01 – Monday, Dec 19, 2pm, LSRC B101
• Sec 02 – Thurs, Dec 15, 7pm, Bio Sci 111
• Closed Book, Closed Notes, Closed neighbor
• Python Reference Sheet
• Covers all topics through today
• Best way to study is practice writing code!
• See old tests (no old final exams)
Final Exam (cont)

• Test format
  – Multiple choice
  – Writing code – similar to exam 2

• Topics include:
  – if, loops, lists, sets, dictionaries, files, functions, sorting, etc
  – recursion, regular expressions – reading level only
Calculate Your Grade

• From “About” tab on course web page

More on Grades

• Lecture – ignore the first two weeks (drop/add period), plus drop 4 points
• Reading Quizzes – will drop 30 points
  • Lots of problems with Sakai this semester
  • Check your grades to make sure they copied over – fill out duke oit help form if they are wrong
• Lab – drop 6 points (each lab is 4 pts)
  • 44 pts total– 38 pts is 100%
Fill out Duke Course Eval

• Please fill out Duke Course Eval on DukeHub now
  – Only 15% have filled it in as of last night

• If you already have, then go to Sakai and fill out feedback on UTAs
Review - Selection Sort

• Sort a list of numbers.

• Idea:
  – Repeat til sorted
    • Find the smallest element in part of list not sorted
    • Put it where it belongs in sorted order.
      • Swap it with the element where it should be

• Sort example

| Sorted, won’t move final position | ??? |
Selection Sort – red area sorted

9 5 4 1 3 6 - find smallest, swap

1 5 4 9 3 6 - end of 1st pass

1 5 4 9 3 6 - find smallest, swap

1 3 4 9 5 6 - end of 2nd pass

1 3 4 9 5 6 - find smallest, swap
Selection Sort (cont.)

1 3 4 9 5 6 - end of 3rd pass

1 3 4 9 5 6 - find smallest, swap

1 3 4 5 9 6 - end of 4th pass

1 3 4 5 9 6 - find smallest, swap

1 3 4 5 6 9 - end of 5th pass, done
Bubble Sort

• Sort a list of numbers.

• Idea:
  – Repeat til sorted
    • Compare all adjacent pairs, one at a time. If out of order then swap them

• Sort example

<table>
<thead>
<tr>
<th>???</th>
<th>Sorted, won’t move final position</th>
</tr>
</thead>
</table>

compsci 101 fall 2016
Bubble Sort
bit.ly/101f16-1208-1

• Sort the list of numbers using BubbleSort.
• The body of the loop is one pass.
• Show the elements after each pass.
• [9, 5, 4, 1, 3, 6]
Code for Bubblesort

```python
def bubblesort(data):
    for j in range(len(data)-1, 0, -1):
        print data
        for k in range(0, j):
            if data[k] > data[k+1]:
                data[k], data[k+1] = data[k+1], data[k]
    return data
```
Insertion Sort

• Sort a list of numbers.

• Idea:
  – Sort by repeated inserting another element
    • Leftmost element is sorted part of list
    • Insert another element in that sublist keeping it sorted
    • Insert another element in that sublist keeping it sorted
    • Etc.

• Sort example

| Sorted relative to each other | ??? |
Insertion Sort
bit.ly/101f16-1208-2

• Sort the list of numbers using InsertionSort.
• The body of the loop is one pass.
• Show the elements after each pass.
• [9, 5, 1, 4, 3, 6]
Merge Sort

• Idea: Divide and Conquer
• Divide list into two halves
• Sort both halves (smaller problem)
• Merge the two sorted halves

9 5 1 4 3 6 2 7
Merge Sort

- Idea: Divide and Conquer
- Divide list into two halves
- Sort both halves (smaller problem)
- Merge the two sorted halves

9 5 1 4 3 6 2 7
9 5 1 4 3 6 2 7  divide list into 2 halves
Merge Sort

- Idea: Divide and Conquer
- Divide list into two halves
- Sort both halves (smaller problem)
- Merge the two sorted halves

9 5 1 4 3 6 2 7
9 5 1 4       3 6 2 7        divide list into 2 halves
1 4 5 9       2 3 6 7        recursively sort each half
Merge Sort

- Idea: Divide and Conquer
- Divide list into two halves
- Sort both halves (smaller problem)
- Merge the two sorted halves

9 5 1 4 3 6 2 7

9 5 1 4       3 6 2 7      divide list into 2 halves
1 4 5 9       2 3 6 7      recursively sort each half
1 2 3 4 5 6 7 9            merge the two sorted list
What does recursively sort mean?

Merge Sort

• Use the same Merge Sort algorithm
  – Divide list into two halves
  – Sort both halves (smaller problem)
  – Merge the two sorted halves

9 5 1 4

9 5 1 4  divide list into 2 halves
5 9 1 4  recursively sort each half
1 4 5 9  merge the two sorted list
def mergesort(data)
    n = len(data)
    if n == 1:
        return data
    else:
        d1 = mergesort(data[:n//2])
        d2 = mergesort(data[n//2:]
        return merge(d1, d2)
Question 1
Which sort is this?
4 10 5 3 8 2
4 10 5 3 8 2
4 5 10 3 8 2
3 4 5 10 8 2
3 4 5 8 10 2
2 3 4 5 8 10

Question 2
Which sort is this?
4 10 5 3 8 2
4 2 5 3 8 10
4 2 5 3 8 10
4 2 3 5 8 10
3 2 4 5 8 10
2 3 4 5 8 10
Wrap up Sorting

• Some Ways to Compare sorts.
  • How many total swaps?
  • Is one faster for certain types of input?
  • Does the input matter

• Different ways to sort?
  – Over 50 sorting algorithms

• Does President Obama know his sorts?

• Sorting animations
  http://www.sorting-algorithms.com/
More on Sorting in CompSci 201

• Learn about this and other sorts in CompSci 201, also how to analyze them to determine which one works best.

• Python: Timsort
  – combines mergesort and insertion sort

• Shellsort
  – uses insertion sort on parts of the list repeatedly - those parts getting larger each time
Scraping email address from websites

• Suppose we want to send email to all Duke Faculty to let them know …
  – Visit Departmental website, people, faculty
  – View (HTML) Source
  – Develop regex to access email – if possible!

• RegexScraper.py
  – Python makes this simple
  – Ethical hacking?
Math Website – Faculty on one page

Pankaj K. Agarwal
Professor of Mathematics (primary appt: Computer Science)
Office: D214A Lev Sci Res Ctr, Durham, NC 27708
Phone: (919) 660-6540
Website

Computational and combinatorial geometry, computational biology, robotics, spatial databases, geographic molecular information systems, and data structures.

Paul S. Aspinwall
Professor of Mathematics (Joint with Physics)
Office: 244 Physics Bldg, Durham, NC 27708
Office Hours: 2:40 to 3:40pm on Tuesdays 1:30 to 2:30pm on Wednesdays
Phone: (919) 660-2874
paul@math.duke.edu
Website

String theory is hoped to provide a theory of all fundamental physics.

What is Computing? Informatics?

• What is computer science, what is its potential?
  - What can we do with computers in our lives?
  - What can we do with computing for society?
  - Will networks transform thinking/knowing/doing?
  - Society affecting and affected by computing?
  - Changes in science: biology, physics, chemistry, …
  - Changes in humanity: access, revolution (?), …

• Privileges and opportunities available if you know code
  - Writing and reading code, understanding algorithms
  - Majestic, magical, mathematical, mysterious, …
Computing - solve all problems?

• Some problems can be solved 'efficiently'
  – Run large versions fast on modern computers
  – What is 'efficient'? It depends

• Some cannot be solved by computer.
  – Provable! We can't wait for smarter algorithms

• Some problems have no efficient solution
  – Provably exponential $2^n$ so for "small" $n$ …

• Some have no known efficient solution, but
  – If one does they all do!
Problem: Traveling Band

- Band wants you to schedule their concerts.
- They don’t like to travel. Minimize the time they are on the bus!
- Given N cities, what is the best schedule (shortest distance) to visit all N cities once?
How do you calculate the best path?

• Try all paths
  – Atlanta, Raleigh, Dallas, Reno, Chicago
  – Dallas, Atlanta, Raleigh, Reno, Chicago
  – Etc.

• Would you agree to code this up?
Answer questions
bit.ly/101f16-1208-4
How is Python like all other programming languages, how is it different?
A Rose by any other name…C or Java?

• Why do we use [Python | Java] in courses?
  - [is | is not] Object oriented
  - Large collection of libraries
  - Safe for advanced programming and beginners
  - Harder to shoot ourselves in the foot

• Why don't we use C++ (or C)?
  - Standard libraries weak or non-existant (comparatively)
  - Easy to make mistakes when beginning
  - No GUIs, complicated compilation model
  - What about other languages?
Find all unique/different words in a file, in sorted order
def main():
    f = open('/data/melville.txt', 'r')
    words = f.read().strip().split()
    allWords = set(words)
    
    for word in sorted(allWords):
        print(word)

if __name__ == "__main__":
    main()
import java.util.*;
import java.io.*;
public class Unique {
    public static void main(String[] args)
        throws IOException{
            Scanner scan =
                new Scanner(new File("/data/melville.txt"));
            TreeSet<String> set = new TreeSet<String>();
            while (scan.hasNext()){
                String str = scan.next();
                set.add(str);
            }
            for(String s : set){
                System.out.println(s);
            }
        }
}
#include <iostream>
#include <fstream>
#include <set>
using namespace std;

int main(){
    ifstream input("/data/melville.txt");
    set<string> unique;
    string word;
    while (input >> word){
        unique.insert(word);
    }
    set<string>::iterator it = unique.begin();
    for(; it != unique.end(); it++){
        cout << *it << endl;
    }
    return 0;
}
Unique words in PHP

```php
<?php

$wholething = file_get_contents("file:///data/melville.txt");
$wholething = trim($wholething);

$array = preg_split("/\s+/", $wholething);
$uni = array_unique($array);
sort($uni);
foreach ($uni as $word){
    echo $word."<br>";
}

?>
```
