Hand in a proposal for your class project, in the style of the proposal you did for homework number 5. You may hand in the same proposal if you like, or a different one. Either way, make sure you address any remarks I may have made about your homework 5 proposal.

Make the research schedule in your proposal more specific by indicating actual dates for each phase. It is strongly recommended that you start working on the actual project, in addition to writing (or polishing) your proposal, as the end of the semester is looming. Make your schedule reflect this, if applicable. Also include the following deadlines in your schedule:

- April 15: Essentially complete draft of the final report, with bulk of the experiments, handed in in class.
- April 22: Final report and software submitted by email to tomasi@cs.duke.edu.
