

# Relational Database Design: E/R-Relational Translation

Introduction to Databases  
CompSci 316 Spring 2020

1

## Announcements (Thu. Jan. 30)

- HW2/Lab1 due tonight (Thurs, Jan 30, 11:59 pm)
- HW3 Q1-Q3 posted
  - Q4, extra credit to be posted next week after the material is covered in class
  - Many parts, start early!
- Please form your groups by next Thursday Feb 6!
  - So that we can help you find a group if needed well before MS1 is due
  - Project formation spreadsheet shared
  - 5 members for standard projects please! (otherwise we may have to shuffling later, better if you do it yourself)
  - If you want to do an open project, let me know asap

2

## Announcements – contd. (Thu. Jan. 30)

- HW extension requests (See the course policy)
  - We cannot accommodate requests for “I need more time” to be fair to all
  - For unforeseen situations not in our control like medical reasons, you must submit an incapacitation form and copy your academic dean while requesting an extension and mention the extra time you need (typically 1-2 days).
  - Make sure that you have an email from me accepting the extension request and specifying the deadline.
  - That deadline is final for you and late submissions with penalty do not apply
  - Be careful as the next hw would be posted

3

## Database design steps: review

- Understand the real-world domain being modeled
- Specify it using a database design model (e.g., E/R)
- Translate specification to the data model of DBMS (e.g., relational)
- Create DBMS schema

4

Today

You designed an ER diagram

Translate it to a Relational Database

*Train* (*number*, *engine*, *time*)  
*Station* (*name*, *address*, *type*)  
*TrainStop* (*train\_number*, *station\_name*, *time*)

5

## E/R model: review

- Entity sets
  - Keys
  - Weak entity sets
- Relationship sets
  - Attributes on relationships
  - Multiplicity
  - Roles
  - Binary versus  $n$ -ary relationships
    - Modeling  $n$ -ary relationships with weak entity sets and binary relationships
  - ISA relationships

6

### Translating entity sets

- An entity set translates directly to a table
  - Attributes → columns
  - Key attributes → key columns

7

### Translating weak entity sets

- Remember the “borrowed” key attributes
- Watch out for attribute name conflicts

8

### Translating relationship sets

- A relationship set translates to a table
  - Keys of connected entity sets → columns
  - Attributes of the relationship set (if any) → columns
  - Multiplicity of the relationship set determines the key of the table

9

### More examples

Parent (parent\_uid, child\_uid)

10

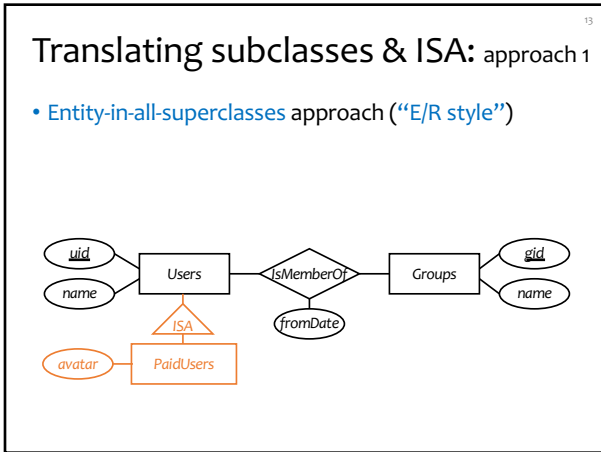

### Translating double diamonds?

RoomInBuilding  
(room\_building\_name, room\_number, building\_name)?

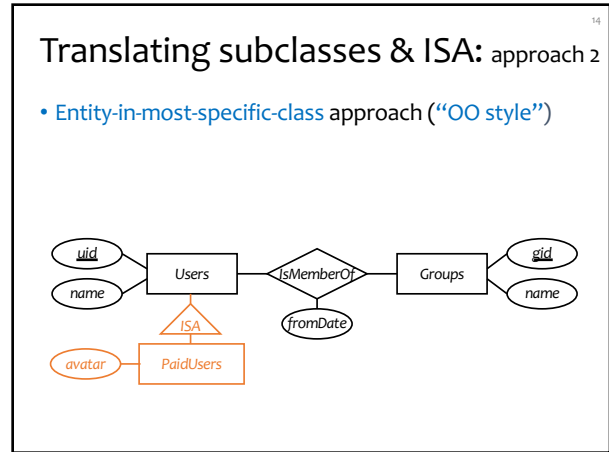

11

### Translating subclasses & ISA

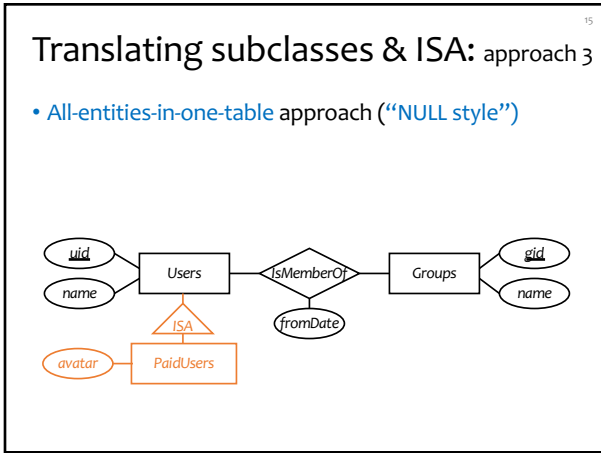

12

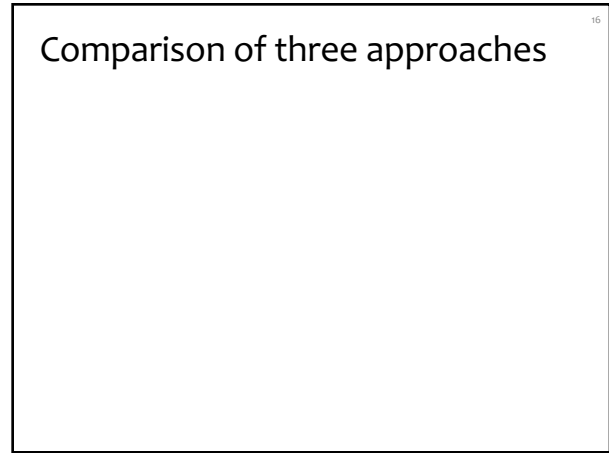

13

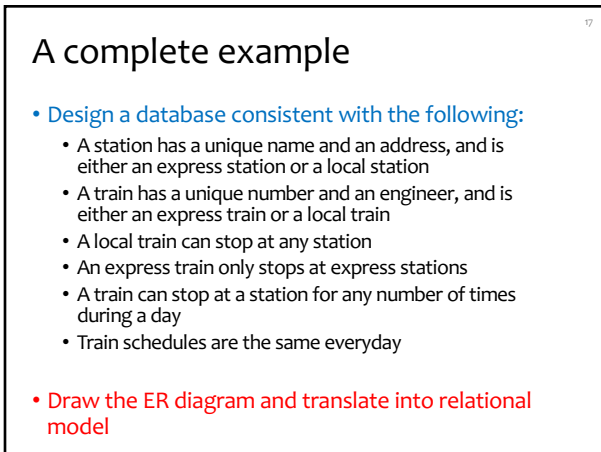

14

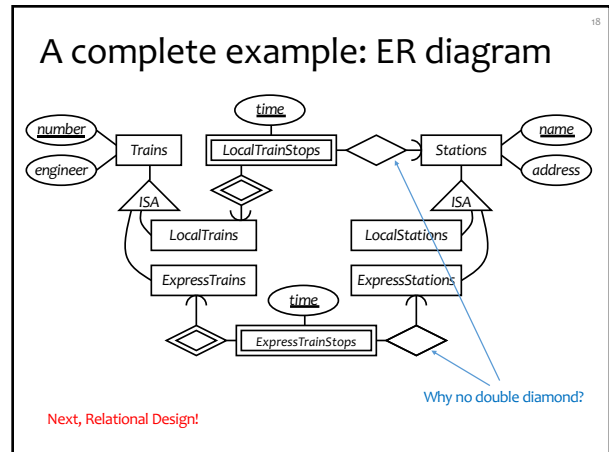

15

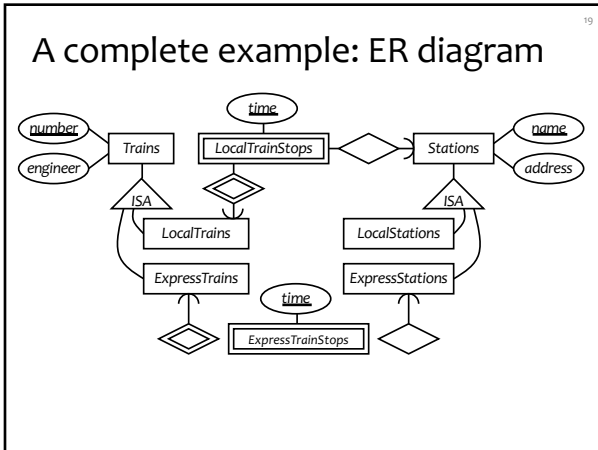

16

17

18

19

### Simplifications and refinements

20

### An alternative design

The simplified ER diagram shows entities Trains (attributes: number, engineer, type) and Stations (attributes: name, address, type). A relationship 'StopsAt' (attribute: time) connects Trains and Stations. A TrainStop entity (attributes: train\_number, station\_name, time) is also shown.

Train (number, engineer, type)  
 Station (name, address, type)  
 TrainStop (train\_number, station\_name, time)

- Encode the type of train/station as a column rather than creating subclasses
- What about the following constraints?
  - Type must be either "local" or "express"
  - Express trains only stop at express stations
- Arguably a better design because it is simpler!

21

**Warning:** mechanical translation procedures given in this lecture are no substitute for your own judgment!

22

### Design principles

- KISS
  - Keep It Simple, Stupid
- Avoid redundancy
  - Redundancy wastes space, complicates modifications, promotes inconsistency
- Capture essential constraints, but don't introduce unnecessary restrictions
- Use your common sense

<http://ungenius.files.wordpress.com/2010/03/thehomer.jpg>

23

### Quick clarifications: RA questions

- What is "some"?
  - At least one
  - e.g., Drinkers frequent **some** bars that serve beer X
- What is "only"?
  - e.g., Drinkers frequent **only** bars that serve beer X
- What is "every"?
  - e.g., Drinkers frequent **every** bars that serve beer X
